Help Your Family *Power Through It All* During Power Outages; Change Batteries in Flashlights and Portable Radios

In an effort to save lives and prevent needless injuries in our community, Bristol Fire/Rescue has joined forces with energizer and the International Association of Fire Chiefs, for spring's *Power Through It All* campaign. The program urges all Americans to adopt a simple habit: change flashlight, portable radio and smoke detector batteries when changing clocks forward to daylight savings time each spring.

Spring and summer bring a heightened potential for severe weather. Storms, floods, hurricanes, and other natural disasters can instantly disrupt our daily lives by suddenly leaving us without electrical power.

A short power outage might result in no more than the inconvenience of having to reset electric clocks; however, loss of electrical power for long periods can place us at risk of injury, illness, and even death.

Working flashlights, one for each member of the family, help people to avoid injuries in a darkened environment. By contrast, lighted candles are a risky lightning source and pose a particularly dangerous risk of fires in stormy conditions, especially when there's a potential for a gas leak. Keep an Energizer Weather Ready 4 LED Flashlight for each member of your family.

A backup supply of fresh batteries, such as Energizer Ultimate Lithium and Energizer MAX AA or AAA batteries represents a margin of safety and comfort.

An emergency power kit can help families stay safe by keeping them connected in the event of a power outage. An emergency power kit should include essential equipment such as a portable radio, working flashlights, portable cell phone charger and extra batteries.

A portable battery-powered radio provides vital information about conditions that led to the power outage and can provide the means to alert the public to continuing weather threats, advice and information about emergency help, and news of when power might be restored. A portable cell phone charger, such as the *Energizer Energi To Go*, charges cell phones on AA batteries. This will allow families to stay connected during prolonged power outages.

“When the lights go out in a home, an inexpensive, working flashlight can prevent serious injury or worse,” says Fire Chief Bob Barnes. “A battery operated radio can be a family’s most useful and informative link to emergency information; it is useless, however, without fresh batteries.”

Assistant Fire Chief and Fire Marshal, Jack Spurgeon, recommends that residents use the Daylight Savings Time switch as a timely reminder to help families develop home safety plans and to prepare emergency safety kits.

Power Through It All is the spring and summer counterpart of the *Change Your Clock Change Your Battery* program. The fall campaign, also sponsored by *Energizer*, Bristol Fire/Rescue and the International Association of Fire Chiefs, urges Americans to adopt the habit of changing batteries in smoke and carbon monoxide detectors when clocks are changed back to standard time.
